Version v1.2

Prepared for Client review

This document lists capabilities available today for clinic teams and patients, plus features still planned.

1. Current features

1.1 Dietitian / Clinic

Practice overview

- Dashboard with clients, tasks, appointments, invoices, messages, and clients needing attention
- Recent activity overview

Client management

- Client roster with search, filters, tags, create, and archive
- Join codes so patients can connect themselves
- Personal clinical chart: identity plus a default clinical profile (visit context, lifestyle, health history, eating patterns, nutrition profile, pregnancy notes)
- Chart sidebar: dated clinical notes, meal notes, eating habits, goals, documents (PDF / Word / TXT), and tags
- Custom forms stay separate from the default clinical profile (build, assign, review in-progress and submitted)
- Measurement tracking and evolution (weight, height, BMI, waist, hips, body fat, muscle mass, skinfolds, labs)
- Review patient daily tracking with labeled amounts and energy; open full nutrition facts for a logged food
- Care timeline
- Portal connection status, invites, and disconnect handling

Meal planning & nutrition

- Multi-day / multi-week meal plans with publish to the patient portal
- Meal / recipe library
- Food database (catalog + clinic custom foods)
- In-plan food search with quantity, unit, filters, and nutrition columns
- Nutrition facts popup (macros and micros) from search or a logged food
- Automatic nutrition calculations

- Habit library and habit assignment

Patient evaluations

- Custom form builder on the client chart
- Assign forms to patients without mixing them into the default clinical profile
- Review in-progress and submitted answers

Calendar & appointments

- Day / week / month calendar
- Schedule, cancel, and reschedule workflows
- Patient visit requests from the portal
- Patient reschedule and cancellation requests from the portal

Messaging & notifications

- Secure 1:1 realtime messaging with patients
- In-app notifications with unread badges

Documents

- Upload and manage client files from the chart (PDF, Word, TXT on Personal data)
- Share with the patient or keep internal to the clinic

Billing & tasks

- Quotations and invoices: draft, issue, send, mark paid, overdue, cancel
- Document preview and printable / save-as-PDF
- Clinic task list with priorities and due dates

Analytics

- Practice analytics: activity, financial summary, clients needing attention

Clinic settings

- Practice profile, timezone, locale, currency, units
- Appointment defaults and invoice defaults

Plan add-ons

- AI assistance (summaries, meal-plan help, notes, message drafts) on plans that include it
- Workflow automations (reminders, messages, tasks) on plans that include them

1.2 Patient / Client portal

Home

- Personal dashboard with next appointment, today's tracking, meal plan snapshot, and messages
- Live pending-forms count on Forms
- Notifications from the header / sidebar bell

My Plan

- View published meal plan by week and day
- See meals, foods/recipes, and nutrition totals
- One-tap log of planned meals into the daily log

Daily log

- Add food on the same page (search, filters, quantity, unit, nutrition columns) — same picker as the clinic
- Open full nutrition facts for a food
- Water, exercise, sleep, and habit tracking with labeled values
- Quick weight log
- Browse any past date

Progress

- Today's tracking overview
- Measurement evolution charts (weight, height, BMI, body composition, and more)

Assessments

- Complete custom forms assigned by the dietitian (separate from clinic chart notes)
- Save progress and submit when ready
- Forms badge updates as soon as a form is assigned or submitted

Messages

- Chat with the dietitian in realtime

Appointments

- View upcoming and past appointments
- Request a new visit
- Request reschedule or cancellation

Documents

- View files shared by the clinic
- Upload files, download, and delete own uploads

Billing

- View invoices and quotations in a document preview
- Print or save as PDF
- Online payment is not built in

Profile & access

- Edit personal details and emergency contact
- Set energy and weight units
- View clinic notes shared for allergies, preferences, and lifestyle context
- Connect to multiple clinics and switch between them
- Join another clinic with a code
- Request to leave a clinic

2. Future features

Templates library

- Meal plan templates to save and reuse full plan structures across clients

- Recommendations templates for reusable guidance
- Foods-to-avoid templates by condition
- Clinic-owned templates plus system starter templates
- Search and filter templates for faster plan building

Richer nutrition facts & charts

- More detailed nutrition charts beyond basic macros
- Visual breakdowns by meal, day, and plan period
- Stronger progress charts and trend insights

AI assistant

- Always-available in-product assistant in the dietitian workspace
- Context-aware help while reviewing clients, building plans, and writing notes
- Suggestions for recommendations, foods to avoid, and plan adjustments
- Draft support reviewed by the dietitian before sharing

Product improvements

- Faster meal-plan building with templates
- Stronger clinical recommendations workflow
- Better reporting and visual analytics
- Continuous workflow and usability improvements based on clinic feedback

Feature requests

We welcome new feature requests that are realistic for a nutrition practice platform. Please share your priorities and use cases. We will review feasibility, clinical value, and delivery timeline with you.
