PRODUCT OVERVIEW

Feature Overview

A complete overview of the CTN Solution Dietitian System capabilities for dietitians and their patients, plus the next features planned for delivery.

Document date: 23 August 2026 **Version:** v1 **Prepared for:** Client review

1. Current features

Capabilities available today for clinic teams and patients.

1.1 Dietitian / Clinic

Practice overview

- Dashboard with clients, tasks, appointments, invoices, messages, and clients needing attention
- Recent activity overview

Client management

- Client roster with search, filters, tags, create, and archive
- Join codes so patients can connect themselves
- Full client chart: profile, goals, preferences, allergies, notes
- Measurement tracking and evolution (weight, height, BMI, waist, hips, body fat, muscle mass)
- Review patient daily tracking (food, water, exercise, sleep, habits)
- Care timeline
- Portal connection status, invites, and disconnect handling

Meal planning & nutrition

- Multi-day / multi-week meal plans with publish to the patient portal
- Meal / recipe library
- Food database (catalog + clinic custom foods)
- Automatic nutrition calculations
- Habit library and habit assignment

Patient evaluations

- Custom evaluation / assessment form builder
- Assign forms to patients
- Review in-progress and submitted answers

Calendar & appointments

- Day / week / month calendar
- Schedule, cancel, and reschedule workflows
- Patient reschedule and cancellation requests from the portal

Messaging & notifications

- Secure 1:1 realtime messaging with patients
- In-app notifications with unread badges

Documents

- Upload and manage client files
- Share with patient or keep internal to the clinic

Billing & tasks

- Invoices: draft, issue, send, mark paid, overdue, cancel
- Printable invoice PDF
- Clinic task list with priorities and due dates

Analytics

- Practice analytics: activity, financial summary, clients needing attention

Clinic settings

- Practice profile, timezone, locale, currency, units
- Appointment defaults and invoice defaults

1.2 Patient / Client portal

Home

- Personal dashboard with next appointment, today's tracking, meal plan snapshot, messages, and notifications

My Plan

- View published meal plan by week and day
- See meals, foods/recipes, and nutrition totals
- One-tap log of planned meals into the daily log

Daily log

- Log food (search catalog + clinic foods, portions, meals)
- Water, exercise, sleep, and habits tracking
- Quick weight log
- Browse any past date

Progress

- Today's tracking overview
- Measurement evolution charts (weight, height, BMI, body composition, and more)

Assessments

- Complete evaluations assigned by the dietitian
- Save progress and submit when ready

Messages

- Chat with the dietitian in realtime

Appointments

- View upcoming and past appointments
- Request reschedule or cancellation

Documents

- View files shared by the clinic
- Upload files, download, and delete own uploads

Billing

- View invoices and open printable PDF

Profile & access

- Edit personal details
- View clinic notes (allergies, preferences, lifestyle)
- Connect to multiple clinics and switch between them
- Join another clinic with a code
- Request to leave a clinic

2. Future features

Planned enhancements to strengthen clinical workflows, nutrition insight, and day-to-day productivity.

Templates library

- Meal plan templates to save and reuse full plan structures across clients
- Recommendations templates for reusable guidance (for example healthy lifestyle or condition-specific advice)
- Foods to avoid templates by condition (for example diabetes, hypertension, high cholesterol, obesity)
- Clinic-owned templates plus system starter templates
- Search and filter templates for faster plan building

Richer nutrition facts & charts

- More detailed nutrition charts beyond basic macros (for example fiber, sugars, sodium, and micronutrients when available)
- Visual breakdowns by meal, day, and plan period
- Clearer comparison views for foods, recipes, and meal plans
- Stronger progress charts and trend insights for dietitians and patients

AI assistant

- Always-available in-product AI assistant in the dietitian workspace
- Context-aware help while reviewing clients, building plans, and writing notes or messages
- Suggestions for recommendations, foods to avoid, and plan adjustments based on client profile and goals
- Draft support for summaries, meal-plan ideas, consultation notes, and message replies (reviewed by the dietitian before sharing)

Product improvements

- Faster meal-plan building with templates
- Stronger clinical recommendations workflow (apply template, then customize per client)
- Better reporting and visual analytics across nutrition and progress data
- UX polish on charts, templates, and assistant for daily clinic use
- Continuous workflow and usability improvements based on clinic feedback

Feature requests

We welcome new feature requests that are realistic for a nutrition practice platform. Please share your priorities and use cases. We will review feasibility, clinical value, and delivery timeline with you.
